

Financial Summary 1st Quarter of FY2015

(April 1, 2015 – June 30, 2015)

July 30, 2015

Contents

1st Quarter of FY2015 Financial Results

- 1. Summary of Financial Results
- 2. Electricity Sales
- 3. Large Industrial Sector
- 4. Electricity Generated & Purchased and Major Factors
- 5. Comparison Statements of Revenue and Expenses (Non-consolidated)
- 6. Balance Sheet (Non-consolidated)
- 7. Statement of Income and Balance Sheet (Consolidated)
- 8. Segment Information (Consolidated)

Topics

- 1. Image of Time Lag Effect -revenue and expense-
- 2. Competitiveness Enhancement of Our Thermal Power Plants
- 3. Current Status of Our Nuclear Power Stations (1/2)
- 4. Current Status of Our Nuclear Power Stations (2/2)
- 5. Agreement to Establish Electric Power Retail Sales Company

[References]

- 1. Storage Battery System Verification Projects
- 2. Response to Renewables Connection Applications
- 3. Fuel Consumption
- 4. Current Status of Faults at Higashidori Nuclear Power Station

Topics

■Time lag between Fuel Costs and Fuel Cost Adjustment Charges

- Fuel cost adjustment system" is a system designed to automatically adjust monthly electricity fee on the basis of average fuel prices actually recorded for three months. This rate shall be applied to electricity fee after a delay of two months.
- Fluctuation in fuel prices causes time lag between when we pay fuel costs and when we receive fuel cost adjustment charges, resulting in temporary increase or decrease in profits.
- ➤ As for the first quarter of 2015, the sharp decline in fuel prices drastically lowered fuel costs; moreover, the fuel cost adjustment system creates time lag and hampers showing accurate revenue from electricity sales, temporarily boosting profits by approximately 23 billion yen.

■Image of time lag effect (y-o-y)

No.3-2 Jul. 2016 (scheduled)

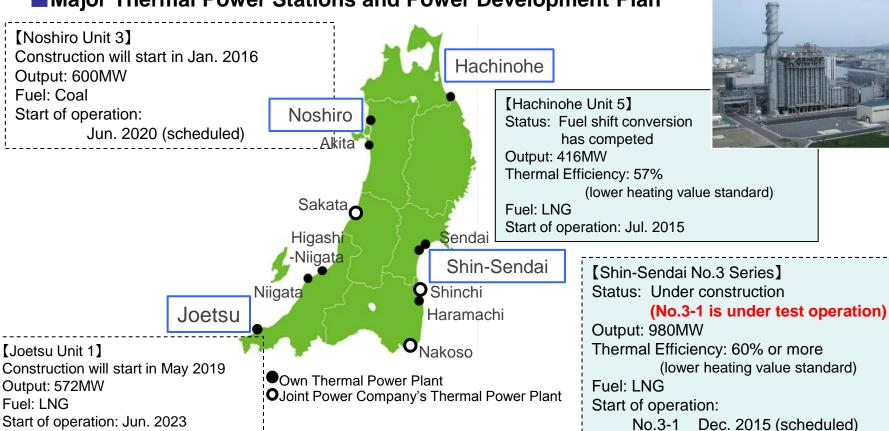

Commencement of Operation at Newly Established LNG Thermal Power Station

- ➤ As for Hachinohe Unit 5, the fuel conversion from light oil to LNG has completed, commencing its commercial operation in July 2015.
- ➤ As for Shin-Sendai No.3 series, we are testing their operation to commence commercial operation in December 2015.

(scheduled)

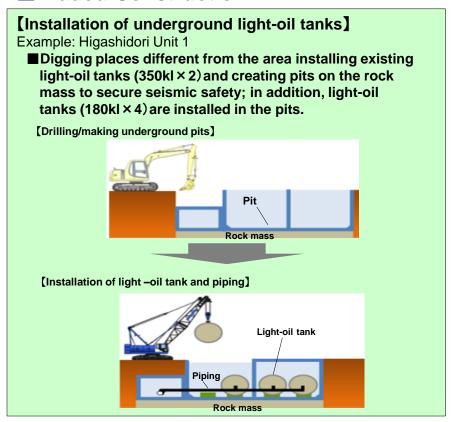

Rescheduling to Comply with New Regulation Standards

- > As for Onagawa Unit 2 and Higashidori Unit 1, based on the knowledge and assessment obtained from the examination process as to compliance with new regulation standards, we have changed the schedule (March 2016) for completion of safety measure construction to April 2017.
- > After the completion in April 2017, while gaining local communities' understanding, we will be striving to make preparation for resuming operation at both Onagawa and Higashidori.

Added Construction

[Fire prevention measures]

- ■Intensifying fire protection measures
- > Installation of different detectors at the same place

Smoke detector

Thermal detector

> Installation of automatic extinguishment equipment in hard-to-fire-fighting places

Automatic extinguishment equipment

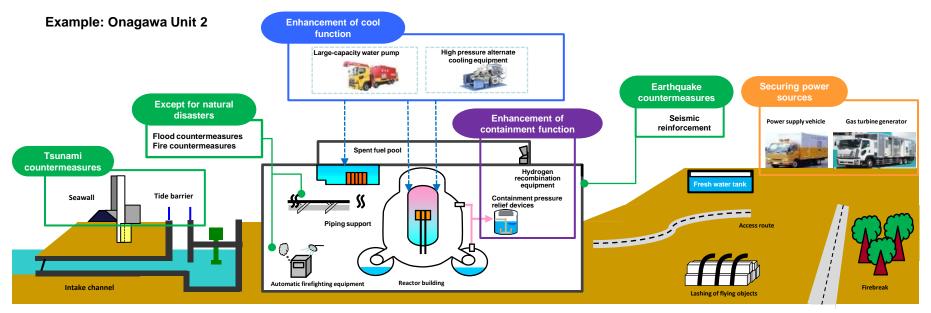

Tohoku Electric Power Current Status of Our Nuclear Power Stations (2/2)

Current Status

Sofoty Magaziros	Aima	Time of Completion		
Safety Measures	Aims	Onagawa	Higashidori	
Filtered Containment Vent	To release the gas in the container through the filter to the air to prevent containment failure and to curb the discharge of radioactive material into the environment in case the pressure in the reactor container increases.	April 2017	April 2017	
Super Seawall	To prevent flooding to the premises in case conceivable maximum tsunami hits. Conceivable tsunami height···Onagawa:approx. 23.1m (upgrading to O.P. approx. 29m), Higashidori: approx. 10.1m (The seawall with the height of O.P. approximately 16m is installed.)		Completed May 2013	
Seismic Isolated Building	To improve command function. The building is to use for on-site emergency headquarters in the event of large-scale nuclear disaster.	April 2017	April 2017	
Reinforcement Work	To secure sufficient seismic safety margins against a conceivable maximum earthquake (basic earthquake ground motion), construction work has been conducting, such as adding supports to or strengthening piping and conduit. ■ Upgraded basic earthquake ground motion •••• Onagawa: 580gals - 1,000gals, Higashidori: 450gals - 600gals	April 2017	April 2017	

■ Image of Safety Measures

Agreement to Establish Electric Power Retail Sales Company

- ➤ Tohoku Electric Power Co., Inc. and Tokyo Gas Co., Ltd have agreed to establish a new electric power retail sales company through joint investment to carry out the electric power retailing business in the Kanto area.
 - (The new company is scheduled to be established in October 2015.)
- ➤ With the full-scale liberalization of electric power retailing, the two companies will make the maximum use of their accumulated business experience and competitive power sources for the stable supply of electric power to high-voltage and extra-high-voltage customers in the Kanto area through the new company.
- ➤ In this way, both companies will work to achieve optimal and comfortable energy usage and cost reductions for customers, provide part of energy supply for the Kanto area, prosper together with local customers, and stimulate regional economies.

Outline of the New Company

Company name: To be decided

Main office location: Inside Tokyo (planned)

Date of establishment: October 2015 (scheduled)

Executive officers: To be dispatched from both companies

Capital at establishment: 990 million yen (capital of 495 million yen, capital reserves of 495

million yen)

Investment ratio: 50% by each company

Business contents: Retail electric power sales to high-voltage and extra-high-voltage

customers in the Kanto area centered on northern Kanto

Supply start date: April 2016 (scheduled)

Storage Battery System Verification Projects

Outline of Verification Projects

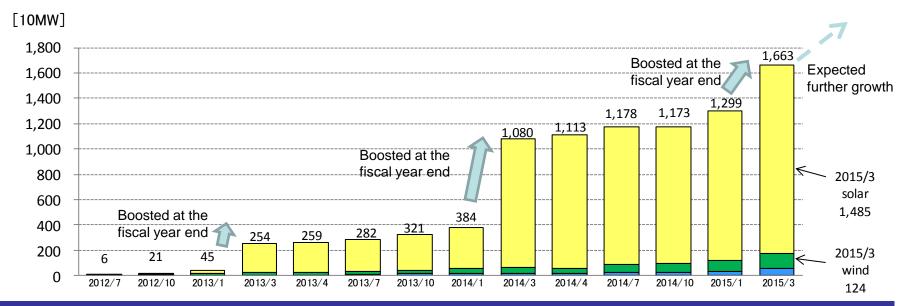

- ➤ To deal with assumed frequency fluctuation and to improve supply-demand balance when a huge amount of renewable energy is connected, we are conducting a verification test utilizing the large-scale storage battery in Miyagi and Fukushima Prefectures.
- The verification project in Fukushima is expected to contribute to reconstruction there.

Naı	mes	Nishisendai Storage Battery Verification Project - to enhance frequency control ability -	Minamisoma Storage Battery Verification Project - to improve supply-demand balance -		
Targets		To verify that the combination of frequency control, mainly conducted by thermal power generation, and the storage battery will enhance the frequency control ability by implementing automatic charge/discharge control of the battery from the Central Load Dispatching Center.	To verify that supply-demand balance improvement will increase the amount of renewable energy capacity connected to grids by charging the battery with surplus power after the large-scale storage battery is connected to a grid.		
	Location	Nishisendai Substation [Sendai, Miyagi Prefecture]	Minamisoma Substation [Minamisoma, Fukushima Prefecture]		
	Specific ations	Lithium-ion battery Output: 20MW (short term: 40MW) Capacity: 20MWh	Lithium-ion battery Output: 40MW Capacity: 40MWh		
Dataila	Start	February 20, 2015	Plan to start at the end of February 2016		
Details	Image	Wind power Monitoring the impact of output fluctuation of renewable energy Output fluctuation Implementation of frequency control and information gathering necessary for frequency control Transmission of instructions for power control operation combining storage battery with thermal power generator Implementation of frequency control and information gathering necessary for frequency control	Utilizing pumping-up power and charging the storage battery, at the time when a huge amount of generated output of renewables could lead to oversupply. Demand (power usage) Solar Power Base Generation Capacity

Current Status of Faults at Higashidori Nuclear Power Station

■ Faults at Higashidori Nuclear Power Station

- Nuclear Regulation Authority Experts Meeting ('Experts Meeting') held on March 25, 2015, submitted 'Evaluation of Fracture Zones at the Higashidori Nuclear Power Station' ('Evaluation Statement') to the Nuclear Regulatory Commission (NRA), resuming examinations as to compliance with new regulation standards.
- ➤ Evaluation Statement, without specific reasons for activity of F-3 and F-9 faults, "have judged that those are faults that will be active in the future because the idea that the deformation originates from the dilation of deteriorated bedrock is unpersuasive". However, we do not think that the statement fully evaluated these faults from the perspective geological structures.
- ➤ We, based on accumulated huge amount of data, are convinced that faults in the premises have not been active since at least the Quaternary Late Pleistocene; consequently, we judge that Quaternary deformation is not tectonic relating to fault activities. We are expressing our opinions to obtain a comprehensive and rational evaluation.

Locations of faults in the premises of Higashidori Nuclear Power Station

■ Final evaluation of geological structure survey of the eastern area of the Shimokita Peninsula

- ➤ We, in cooperation with Japan Nuclear Fuel Limited, TEPCO and Recyclable-Fuel Storage Company, conducted a geological structure survey of the eastern part of the Shimokita Peninsula (and also conducted offshore boring survey with a deep-sea research drilling vessel 'Chikyu').
- ➤ The results have confirmed that the continental shelf edge has not been active since approximately 250 thousand years ago, and that the geology of the continental shelf and the steep slope of the shelf edge are sedimentary layers in the Neogene, middle Miocene (ca.16~12Ma).
- > This evaluation is created with advice from an independent committee consisting of experts.
